SUMMARY

Third-year B.Tech CSE (Data Science) student who designs and builds end-to-end product concepts — from problem scoping and feature prioritization through to go-to-market and business-model thinking — most recently in mental health and women's safety tech. Combines technical building (Python, Flutter, ML fundamentals) with product framing, stakeholder communication, and cross-functional leadership experience.

PROJECTS

MANASA — *Bilingual, gamified DBT-based mental health support platform*

- Scoped and designed a bilingual (Malayalam + English) app applying Dialectical Behaviour Therapy (DBT) to emotional dysregulation, anxiety, and depressive symptoms — defined the core product loop: situation → emotion → intensity → DBT skill suggestion → guided practice → reflection → progress tracking.
- Defined the feature set end-to-end: gamified DBT learning, real-time situation-to-skill suggestions, mood/pattern tracking, a therapist dashboard, a parent/guardian view, and a private journal — balancing user needs against clinical safety constraints.
- Built out the go-to-market and business case: authored a concept document covering clinical safety framework, partnerships, monetization (B2B2C/clinic licensing, freemium, institutional pilots), and roadmap; translated it into an investor-style pitch deck.
- Identified clinical validation partners (professional bodies such as IPS, IACP) as a prerequisite workstream — demonstrating awareness of trust and safety requirements in a regulated health space.

FeMaura — *Women's safety and health app*

- Built a Python-based application addressing women's safety and health, motivated by a personal research interest in applying AI/ML to women's health data.
- Used as the technical foundation for an explored research direction on ML applications in women's health — connecting a shipped prototype to a longer-term research thesis.

EduHub — *College management system*

- Designed and built a Java-based college management system covering core administrative workflows, as a featured technical project demonstrating full-stack problem decomposition.

Entrepreneur AI Assistant — *AI tool built at Huddle Global hackathon to support early-stage entrepreneurs*

- Built an AI-powered tool at the Huddle Global hackathon designed to help entrepreneurs navigate early-stage decisions — applying the same problem-scoping and rapid-build approach used on MANASA and FeMaura under hackathon time constraints.

Memento — *Digital journal & memory app*

- Built a single-file React application for journaling and memory-keeping, including mood tracking, a drawing canvas, scrapbook-style memory pages, and an integrated AI assistant — focused on polished, feature-rich frontend UX.

INTERNSHIP EXPERIENCE

- AI & Machine Learning Intern — Srishti Innovation
- Flutter & Dart Intern — Genzee Technologies
- Young Innovators Programme (YIP) Intern
- Virtual Intern — TCS MasterCraft™ DataPlus
- Python Fundamentals Intern — Great Learning

LEADERSHIP & IMPACT

- Chair, IEEE Industry Applications Society (IAS), UKFCET — previously Vice Secretary; led society programming and represented the chapter at IEEE hub-level events (AKIASSC 2025, PELS Day Awards, Travancore Hub HSR).
- Women & Innovation Lead and Content Creator, UKFCET; College Union Representative (2nd year).
- Innovation idea selected by the Kerala Startup Mission (KSUM); selected for the Young Innovators Programme (YIP).
- Winner of multiple intercollegiate hackathons and ideathons for technology solutions built under time pressure with cross-functional teams.

- Participant — Huddle Global and LEADS National Entrepreneurship Conclave (NEC).
- Host/Anchor for technical, cultural, and professional events at college and intercollegiate level, including IEEE UKFCET's flagship webinar — regular public-facing communication and stakeholder-facing presentation experience.
- Volunteer — Unfold 2026.

EDUCATION

B.Tech, Computer Science & Engineering (Data Science) — UKF College of Engineering & Technology, Parippally

2024 – Present · Third year, Semester 4 complete, no backlogs

Higher Secondary Education — 95% | SSLC — Full A+

TECHNICAL SKILLS

Languages & Fundamentals: Python, Java (basics), C, HTML/CSS, Flutter & Dart (basics), Data Structures, DBMS, OOP, Operating Systems, AI/ML Fundamentals

Tools: VS Code, Canva, PowerPoint, Word

CERTIFICATIONS

NPTEL — Python | NASSCOM FutureSkills — Digital Skills | Python Fundamentals (Great Learning) | TCS MasterCraft™ DataPlus — Overview | AI & ML Internship (Srishti Innovation) | Flutter & Dart Internship (Genzee Technologies)

JOB SIMULATIONS

- GenAI-Powered Data Analytics Job Simulation
- Internal Audit Job Simulation
- Operations / Industrial Engineer Job Simulation
- Data Analytics Job Simulation
